Task 2: Test log

Description of test	Test data to be used (if required)	Expected outcome	Actual outcome	Comments and intended actions
Testing to see if new title and content appear on website	n/a	Displays new heading and content when I open the website	Figure 1	Add my intended colour scheme.
Testing too see if editing a colour will actually change on the website	n/a	Displays new colour scheme over an old colour	Figure 2	Finish adding intended scheme
Testing to see if new		All colours are from	Figure 3 – content of	Fix colour of content

colour scheme works		the new colour scheme	page was not correct colour	edit 1
Check content colour scheme		Content is now from the new colour scheme	Figure 4 – success	Add register page
Check register page is accessible	From index page click "register"	Register page appears	Figure 5 – nav bar is missaligned and register page is visible yet asking for incorrect information	Make register page ask for correct information
Check changes I make to required register information	Same as before	Information I need to enter is the correct info	Figure 6 – getting user to enter thair first name is labeled	Edit 2

apply			incorrectly	
Check change was made correctly	Same as before	First name is written as “First name”	Figure 7 - success	Finish changing required register information
Check if all required info is asked on register page	Same as before	All required information is asked for in register page	Figure 8 - success	Make sure database is linked to website
Check register page performs its basic functions	Go onto register page and then enter in valid information into each box	Details are visible in the database	Figure 9	Add user called “root” to the admins so that I can access the database via the website – then found out that I was having

				a driver issue and that I already had a user named root
Check register page performs its basic functions	Same as before	Details will be visible on the database	Figure 10 – checking if there was only one of that user had an issue	remove this feature until I figure out how to fix and try again
Check register page performs its basic functions	Same as before	Same as before	Figure 11 – clearly there’s an issue with bind_param	Change all bind_param to bindParam – edit 3
Check register page performs its basic functions	Same as before	Same as before	Figure 12	Correct formatting of bind the parameter email – edit 4

Check register page performs its basic functions	Same as before	Same as before	Figure 13	Edit 5
Check register page performs its basic functions	Same as before	Same as before	Figure 14	Correct capitalisation of Fname, also correct Lname – edit 6
Check register page performs its basic functions	Same as before	Same as before	Figure 15	Remove loyalty points from version 1 edit 7
Check register page performs its basic functions	Same as before	Same as before	Figure 16	Add getnewuserid function

Check register page performs its basic functions	Same as before	Same as before	No confirmation of registration, however user is registered on the database – figure 17	Work on login feature
Check login page performs its basic functions	Enter in email and password of the registered user	User can login and access login nav bar	Figure 18	Edit 8
Check login page performs its basic functions	Enter in email and password of the registered user	User can login and access login nav bar	Figure 19	Create dbconnect select feature
Check login page performs its basic	Enter in email and password of the	User can login and access login nav bar	Figure 20	Fix how I bind email as parameter – edit 9

functions	registered user			
Check login page performs its basic functions	Enter in email and password of the registered user	User can login and access login nav bar	User was sent back to start of login page with no signs of being logged in other than figure 21 appearing at the bottom of index	Edit 10
Check login page performs its basic functions	Enter in email and password of the registered user	User can login and access login nav bar	User was already logged in so had access to logged in navbar – figure 22	Test log out
Check log out works	While logged in click	User is logged out	Figure 23 – issues	Remove audit feature

	log out		with auditing logout	for log out in version 1 – edit 11
Check log out works	While logged in click log out	User is logged out	Figure 24 – message displayed in index as soon as I opened website, also figure 25 appeared while trying to log in	Remove auditing from website for version 1
Check log out works	While logged in click log out	User is logged out	Figure 26 – logout was successful	Add the “about us” page
Check “about us” appears	Access the “about us” page by opening from the php file	“About us” page appears	Figure 27	Check “about us” can be navigated to via the website

Check “about us” can be navigated to via the website	Access the about us page via index page using the nav bar	About us page appears when I click “about us”	Figure 28	Add order page
Check order page can appears	Access the order page by opening from the php file	Order page appears	Figure 29 – website not treating user like they are logged in	Check order page can be navigated to via the website
Check order page can be navigated to via the website	Access the order page via index page using the nav bar	order page appears when I click “order”	Figure 30 – website not treating user like they are logged in	Edit 12
Check order page will display the correct nav bar when logging in	n/a	Nav bar will be corrected	Figure 31 – nav bar corrected	Add producer registration (V2)

Version 2

Description of test	Test data to be used (if required)	Expected outcome	Actual outcome	Comments and intended actions
Check Producer register page can add producer to database	Access the producer page by opening from the php file	producer register page appears	Figure 32	Remove checking if they are the only producer for current version
Check Producer register page can add producer to database	Access the producer page by opening from the php file	producer register page appears	Figure 33	Make producer register page more clear it's for producers

Check producer register page looks more like its for producers	Access the producer page by opening from the php file	producer register page appears and looks like it’s for producers	Figure 34	Check producer registration works
Check producer registration works	Enter valid details into producer register page	producer details are put into producer database	Figure 35	Add reg_user but for producers function
Check producer registration works	Enter valid details into producer register page	producer details are put into producer database	Figure 36	Edit 13 – make email and other text based fields text not string in the database
Check producer registration works	Enter valid details into producer register page	producer details are put into producer database	Figure 37	Add producer registration to nav bar

Check if producer registration has been successfully added to the nav bar	Click on producer registration from index page	There is an option to click producer registration and user is brought to producer registration page	Figure 38	Change topbar so that customers and producers see different things when they log in, and also create producer login page
Login to producer account	Login to producer account	The producer will be logged in and will have logout appear in the navbar (other pages not made yet)	Figure 39	Edit 14 – use elseif and isset statement to correct error
Check the new navbar	Login to producer account	The producer account will have logout appear in the navbar (other pages not made yet)	Figure 40	Create an add product feature

Try to add product	Enter product details to add stock page	New product registerd to database	Figure 41	Put producer ID in the list of information that the add stock page takes
Try to add product	Enter product details to add stock page	New product registerd to database	Figure 42 – price is boolean not float	Make price float
Try to add product with a float price	Enter product details to add stock page – using a price that can be float and not integer	New product registered to database with float price	Figure 43 – prevents producer from having multiple products	Allow producers to have multiple products – indexed ProducerID in product table rather than making it unique

Check I can have multiple products from one producer	Create new product on producer account that already has a product	New product registered with same producer ID as the first product	Figure 44	Create Product viewer for Producers
Login to producer account recap what I have completed on it	Login to producer account	Everything I have created is accessible	Figure 45	Edit 16 – remove line of code I used for debugging Producer Login
Check how product viewer looks	Open product viewer page while logged into Producer account	An error as page is unfinished	Figure 46	Edit 17
Check how product	Open product viewer	An error as page is	Figure 47 – blank page	Rearange how brackets

viewer looks	page while logged into Producer account	unfinished		are ordered
Check how product viewer looks	Open product viewer page while logged into Producer account	An error as page is unfinished	Figure 48	Edit 18
Check how product viewer looks	Open product viewer page while logged into Producer account	An error as page is unfinished	Figure 49	Edit 19, also managed to spot a different error - edit 20
Check how product viewer looks	Open product viewer page while logged into Producer account	An error as page is unfinished	Figure 50 – no styling on website and only one product	Edit 21

Check how product viewer looks	Open product viewer page while logged into Producer account	An error as page is unfinished	Figure 51	Check If I can delete products
Check If I can delete products	Click on delete product for one of the products shown	Product is removed from database and table	Figure 52	Add remove product feature
Check If I can delete products	Click on delete product for one of the products shown	Product is removed from database and table	Figure 53	Fix remove product function
Check If I can delete products	Click on delete product for one of the products	Product is removed from database and	Figure 54 – remove product function	Fix remove product function

	shown	table	infinitely calls dbconnect_select	
Check If I can delete products	Click on delete product for one of the products shown	Product is removed from database and table	Figure 55	Fix usermessage when deleting product
Check If I can delete products	Click on delete product for one of the products shown	Product is removed from database and table	Figure 56	Work on customer ordering system
Check how customer ordering system is progressing	Open customer ordering system while signed in to user	No products will appear as there are no products in database	Figure 57	Use a different function to view products from producers

	account			
Check how customer ordering system is progressing	Open customer ordering system while signed in to user account	No products will appear as there are no products in database	Figure 58	Add products to database and see what happens
Check how customer ordering system is progressing	Open customer ordering system while signed in to user account	Product named eggs will appear along with details about them	Figure 59	Edit 22
Check how customer ordering system is	Open customer ordering system while	Product named eggs will appear along with	Figure 60	Edit 23

progressing	signed in to user account	details about them		
Check how customer ordering system is progressing	Open customer ordering system while signed in to user account	Product named eggs will appear along with details about them	Figure 61	Make the only option order rather than delete or change
Check how ordering looks	Open customer ordering system while signed in to user account	Product named eggs will appear, and there will be option to choose amount and order	Figure 62	Correct link to the correct tables when ordering
Check how ordering	Open customer	Product named eggs	Figure 63	Add more products to

looks	ordering system while signed in to user account	will appear, and there will be option to choose amount and order		product table to further test order system
Check how ordering works with multiple products	Open customer ordering system while signed in to user account	Multiple products will appear, and there will be option to choose amount and order	Figure 64	
Check how ordering works with multiple products	Open customer ordering system while signed in to user account	Multiple products will appear, and there will be option to choose amount and order	Blank screen	Figure out how to make the order page appear again – I figured out my html was indented into an if statement, un indent my html

Check how ordering works with multiple products	Open customer ordering system while signed in to user account	Multiple products will appear, and there will be option to choose amount and order	Figure 65	Create a basket page, which displays a users order to them
Check how basket page looks	Open basket in user account that has on order registered to them	The products user has bought will apear	Figure 66	Get the correct data for basket
Check how basket page looks	Open basket in user account that has on order registered to them	The products user has bought will apear	Figure 67	Also access producer table for the basket feature

Check how basket page looks	Open basket in user account that has on order registered to them	The products user has bought will apear	Figure 68	Now change customer options to remove and change quantity of products
Check how basket page looks and how quantity changing works	Open basket in user account that has on order registered to them	The products user has bought will appear with an option to either remove or edit stock	Figure 69, when trying to edit quantity figure 70	Fix product typo and change the box from saying buy to edit amount
Check how basket page looks and how quantity changing works	Open basket in user account that has on order registered to them	The products user has bought will appear with an option to either remove or edit stock	Figure 71 – this only adds to quantity and doesn’t change it	Make it so that edit amount only edits amount and doesn’t add to existing amount

Check how basket page looks and how quantity changing works	Open basket in user account that has on order registered to them	The products user has bought will appear with an option to either remove or edit stock	Figure 72 – unfortunately it will add to quantity if the addition is still below the stock	
Check how basket page looks and how quantity changing works	Open basket in user account that has on order registered to them – and change amount if a product user is buying	The products user has bought will appear with an option to either remove or edit stock	Figure 73 – now only changes quantity (success)	Improve how website looks
Check how new website styling looks	Navigate around the website	Greens and yellows have been switched, navbar highlight option when hovered over	Figure 74 – now also highlights options on the navbar in yellow when hovered over	Add multiple shades of green around different parts of the website

Check how new website styling looks	Navigate around the website	Multiple different shades of green in the website	Figure 75 - success	writeup
